DETAILED ACTION

Allowable Subject Matter

Claims 61-80 are allowed in view of the Applicant's arguments (Response filed 8/17/2006, pgs 9-14) and the cited prior art of record. As Applicant states, "all data traffic to and from a first client in the network is monitored for cacheable queries to multiple other clients and responses thereto, which come from multiple other clients. When such queries or responses are identified, they are intercepted by the acceleration server and the responses aggregated before being transmitted to the first client (and potentially later to other clients). The acceleration server and the method carried out thereby, and particularly the interception of queries and responses by the acceleration server, and the transmission of responses by the acceleration server, are transparent to the clients, meaning that the clients continue to believe that they are communicating directly with each other (see Applicants Response, pg 9, ¶2)." In addition to these features described by Applicant, the independent claims also include a first client in the peer-to-peer network sends a query to at least two other clients and each of the two other clients provide solely a portion of a response to the query, the acceleration server monitoring and intercepting all communication, as explained above, aggregating the portions into a complete response, and transmitting at least a portion of the response transparently to the first client, which, in addition to the rest of the claim limitations, are distinguished from the prior art. For support, see Instant Specification (pg. 3, lines 6-10, pg. 6, lines 10-11, pg. 11, lines 4-6, pg. 13, line 7 through pg. 14, line 4, pg. 16, lines 2-3)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
